

THE AUTO LOCKING STAND

Strong and light wooden stand, very stable thanks to its bevelled legs, lightening speed and simple to operate.

The unprecedented shape of its head provides its auto locking function; it stands open and locks by the weigh applied upon it, preventing its shutting.

No latch or compasses needed!

It opens, shuts and folds very easily, suitable for the odd DIY as well as for professionals and particularly for local communities and happening business.

The auto locking stand is a patented invention protected by international laws and regulations.
